

PRESS RELEASE

MWC 2025: Obvios unveils Intelligent Security, a new integrated cybersecurity feature of its private 5G solution, Dome

Rennes, February 12, 2025 - For the second year in a row, Obvios—a pioneer in sovereign private 5G software—will be showcasing its latest innovations at Mobile World Congress from March 3 to 6, 2025, in Barcelona. At this year's event, Obvios will introduce Intelligent Security, a cutting-edge cybersecurity feature integrated into its Dome solution, along with new tailored offerings for system integrators and industrial businesses. Already adopted by numerous SMEs, mid-sized companies, and large industrial enterprises, Dome provides a robust and secure private 5G connectivity bubble. Antifragile, interoperable, and easy to configure, it is the preferred choice for organizations seeking reliable and secure connectivity.

A Groundbreaking Feature to Enhance Core Network Security

Dome now integrates a new feature designed to enhance network protection beyond standard 3GPP requirements. Called Intelligent Security, this AI-driven, real-time security system can be directly embedded in the core network, ensuring highly secure and reliable mobile connectivity. This feature offers a significant advantage over existing solutions.

New solutions tailored for integrators and industrial businesses

Obvios is also rolling out three tailored solutions to meet the specific needs of integrators and industrial businesses:

- The Lab solution – A “try and buy” model for hands-on testing and training with Dome and private 5G,
- The PoC solution – A six-month deployment, available under a “pay as you grow” model,
- Commercial license – For full-scale deployment.

Dome can be deployed across multiple verticals, including industry 4.0, defense, public safety, media, and events coverage. These applications will be demonstrated at the Obvios booth (CS106) at MWC from March 3 to 6, 2025.

If you would like to request an interview or a demo, please do not hesitate to contact us.

About Obvios

Obvios develops 100% software-based private 5G network solutions. It's all we do, that's why we are good at it. Our private 5G connectivity solutions are robust yet easy to deploy and operate. We aim to make them as straightforward and cost-effective as traditional technologies while ensuring better security and coverage. By leveraging cloud computing tools and methods, we are more agile and responsive in both the development of our private 5G solutions and our client interactions. Our goal is to innovate and simplify. Founded in 2023, Obvios is a spin-off of b<>com, a French Technological Research Institute. Based in Cesson-Sévigné, we have a site in Lannion and an office in Paris.
